We have only applied to NSE to use its name as the Stock Exchange in this offer document for listing our shares on the NSE- Emerge. In accordance with Indian law and practice, permission for listing and trading of the Equity Shares issued pursuant to the Issue will not be granted until after the Equity Shares have been issued and allotted. Approval for listing and trading will require all relevant documents authorizing the issuing of Equity Shares to be submitted. There could be a delay in listing the Equity Shares on the NSE- Emerge. Any delay in obtaining the approval would restrict your ability to dispose of your Equity Shares.

- 27. *There are restrictions on daily movements in the price of the Equity Shares, which may adversely affect a shareholder's ability to sell, or the price at which it can sell, Equity Shares at a particular point in time.***

Following the Issue, we will be subject to a daily "circuit breaker" imposed by NSE, which does not allow transactions beyond specified increases or decreases in the price of the Equity Shares. This circuit breaker operates independently of the index-based, market-wide circuit breakers generally imposed by SEBI on Indian stock exchanges. The percentage limit on our circuit breakers will be set by the stock exchanges based on the historical volatility in the price and trading volume of the Equity Shares.

B. EXTERNAL RISK FACTORS

- 28. *We have not prepared, and currently do not intend to prepare, our financial statements in accordance with the International Financial Reporting Standards ("IFRS"). Our transition to IFRS reporting could have a material adverse effect on our reported results of operations or financial condition.***

Public companies in India, including us, may be required to prepare annual and interim financial statements under IFRS in accordance with the roadmap for convergence with IFRS announced by the Ministry of Corporate Affairs, Government of India through a press note dated January 22, 2010 (the "IFRS Convergence Note"). The Ministry of Corporate Affairs by a press release dated February 25, 2011 has notified that 35 Indian Accounting Standards are to be converged with IFRS. The date of implementation of such converged Indian accounting standards has not yet been determined. Our financial condition, results of operations, cash flows or changes in shareholders' equity may appear materially different under IFRS than under Indian GAAP or our adoption of converged Indian Accounting Standards may adversely affect our reported results of operations or financial condition. This may have a material adverse effect on the amount of income recognized during that period and in the corresponding (restated) period in the comparative Fiscal/period.

29. *Political instability or changes in the Government could adversely affect economic conditions in India generally and our business in particular.*

Our business, and the market price and liquidity of our Equity Shares, may be affected by interest rates, changes in Government policy, taxation, social and civil unrest and other political, economic or other developments in or affecting India. Elimination or substantial change of policies or the introduction of policies that negatively affect the Company's business could cause its results of operations to suffer. Any significant change in India's economic policies could disrupt business and economic conditions in India generally and the Company's business in particular.

30. *Financial instability in Indian financial markets could adversely affect our company's results of operations and financial condition.*

In this globalized world, the Indian economy and financial markets are significantly influenced by worldwide economic, financial and market conditions. Any financial turmoil, say in the United States of America, Europe, China or other emerging economies, may have a negative impact on the Indian economy. Although economic conditions differ in each country, investors' reactions to any significant developments in one country can have adverse effects on the financial and market conditions in other countries. A loss in investor confidence in the financial systems, particularly in other emerging markets, may cause increased volatility in Indian financial markets. Indian financial markets have also experienced the contagion effect of the global financial turmoil. Any prolonged financial crisis may have an adverse impact on the Indian economy, thereby resulting in a material and adverse effect on our Company's business, operations, financial condition, profitability and price of its Shares. Stock exchanges in India have in the past experienced substantial fluctuations in the prices of listed securities.

31. *Foreign investors are subject to foreign investment restrictions under Indian law that limits our ability to attract foreign investors, which may adversely impact the market price of the Equity Shares.*

Under the foreign exchange regulations currently in force in India, transfers of shares between nonresidents and residents are freely permitted (subject to certain exceptions) if they comply with the pricing guidelines and reporting requirements specified by the RBI. If the transfer of shares, which are sought to be transferred, is not in compliance with such pricing guidelines or reporting requirements or fall under any of the exceptions referred to above, then the prior approval of the RBI will be required. Additionally, shareholders who seek to convert the Rupee proceeds from a sale of shares in India into foreign currency and repatriate that foreign currency from India will require a no objection/ tax clearance certificate from the income tax authority. There can be no assurance that any approval required from the RBI or any other government agency can be obtained on any particular terms or at all.

32. *Global economic, political and social conditions may harm our ability to do business, increase our costs and negatively affect our stock price.*

Global economic and political factors that are beyond our control, influence forecasts and directly affect performance. These factors include interest rates, rates of economic growth, fiscal and monetary policies of governments, inflation, deflation, foreign exchange fluctuations, consumer credit availability, fluctuations in commodities markets, consumer debt levels, unemployment trends and other matters that influence consumer confidence, spending and tourism. Increasing volatility in financial markets may cause these factors to change with a greater degree of frequency and magnitude, which may negatively affect our stock prices.

33. *Taxes and other levies imposed by the Government of India or other State Governments, as well as other financial policies and regulations, may have a material adverse effect on our business, financial condition and results of operations.*

Taxes and other levies imposed by the Central or State Governments in India that affect our industry include sales tax, income tax and other taxes, duties or surcharges introduced on a permanent or temporary basis from time to time. Imposition of any other taxes by the Central and the State Governments may adversely affect our results of operations.

34. Any downgrading of India's sovereign rating by an independent agency may harm our ability to raise financing.

Any adverse revisions to India's credit ratings for domestic and international debt by international rating agencies may adversely impact our ability to raise additional financing, and the interest rates and other commercial terms at which such additional financing may be available. This could have an adverse effect on our business and future financial performance, our ability to obtain financing for capital expenditures and the trading price of our Equity Shares.

35. Natural calamities could have a negative impact on the Indian economy and cause Our Company's business to suffer.

India has experienced natural calamities such as earthquakes, tsunamis, and floods in recent years. The extent and severity of these natural disasters determine their impact on the Indian economy. Prolonged spells of abnormal rainfall or other natural calamities could have a negative impact on the Indian economy, which could adversely affect our business, prospects, financial condition and results of operation as well as the price of the Equity Shares.

36. A significant change in the central and state governments' economic liberalization and deregulation policies could disrupt our business. A change in taxation laws could also adversely impact our financial condition and results of operations.

Our performance and growth are dependent on the health of the Indian economy and more generally the global economy. The economy could be adversely affected by various factors such as political or regulatory action, including adverse changes in liberalization policies, social disturbances, terrorist attacks and other acts of violence or war, natural calamities, interest rates, commodity and energy prices and various other factors. Any change in the Government's policies in the future could adversely affect business and economic conditions in India and could also adversely affect our business prospects, financial condition and results of operations. A significant change in India's economic liberalization and deregulation policies could disrupt business and economic conditions in India generally and specifically have an adverse effect on our operations.

37. You may be subject to Indian taxes arising out of capital gains on sale of Equity Shares.

Under current Indian tax laws and regulations, capital gains arising from the sale of equity shares in an Indian company are generally taxable in India. Any gain realized on the sale of listed equity shares on a stock exchange held for more than 12 months is not subject to capital gains tax in India if securities transaction tax ("STT") is paid on the transaction. STT will be levied on and collected by a domestic stock exchange on which the Equity Shares are sold. Any gain realized on the sale of equity shares held for more than 12 months to an Indian resident, which are sold other than on a recognized stock exchange and on which no STT has been paid, will be subject to long term capital gains tax in India. Further, any gain realized on the sale of listed equity shares held for a period of 12 months or less will be subject to short term capital gains tax. Any change in tax provisions may significantly impact your return on investments.

SECTION III – INTRODUCTION

SUMMARY OF OUR INDUSTRY

Overview of Indian Economy

India, a South Asian nation, is the seventh-largest country by area, the second-most populous country with over 1.25 billion people, and the most populous democracy in the world. India is the fourth largest economy in the world in terms of purchasing power parity (PPP). Gross Domestic GDP of the country for the year 2014-2015 stood at INR 106.6 trillion (US\$ 1.60 trillion) as compared to INR 99.21 trillion (UD\$ 1.49 trillion) in 2013-14 . India's economy has witnessed a significant economic growth in the recent past, growing by 7.2 % in 2015 as against 6.6 % in 2014. India is set to become the world's fastest-growing major economy by 2016 ahead of China, the International Monetary Fund (IMF) said in its recent latest forecast. Service sector contributes 65% to the GDP were as Industry and Agriculture shares the pie with 18% and 17% respectively. The Asian Development Bank (ADB) in its update released on July 16, 2015 for the Asian Development Outlook, kept its forecasts for India's GDP growth unchanged. The ADB expects India to grow by 7.8 % in 2015-16 backed by healthy growth in agriculture and a pick up in investment activity.

Passing through the phase of high current account deficit, rising inflation, slowing down in capex cycle and industrial activities, now the economy is witnessing some revival. Fall in crude oil prices supported to grapple the rising inflation as well as rates cuts is expected from the central bank that could be the positive sign for accelerating the investment cycle in the Economy. Index of Industrial Production which depicts the performance of eight core industries of Indian economy for 2014-15 has grown by 3.6 % as compared to 4.2 % in 2013-14.

India's current account deficit reduced sharply to US\$ 1.3 billion (0.2 % of GDP) in the fourth quarter of 2015 compared to US\$ 8.3 billion (1.6 % of GDP) in the previous quarter, indicating a shrink in the current account deficit by 84.3 % quarter-on-quarter basis., as global oil prices slumped while foreign investments into the country remained robust.

India's Index of Industrial Production (IIP) grew by 4.1 % in April 2015 compared to 2.5 % in March 2015. The growth was largely due to the boost in manufacturing growth, which was 5.1 % in April compared to 2.8 % in the previous month. May came in at 2.7 %, falling from 4.1 %, led by a sharp fall in capital goods and consumer goods data.

India's Consumer Price Index (CPI) inflation rate increased to 5.01 % in May 2015 compared to 4.87 % in the previous month. On the other hand, the Wholesale Price Index (WPI) inflation rate remained negative at 2.36 % for the seventh consecutive month in May 2015 as against negative 2.65 % in the previous month, led by low crude oil prices.

Apart from being a critical driver of economic growth, foreign direct investment (FDI) is a major source of non-debt financial resource for the economic development of India. Foreign companies invest in India to take advantage of cheaper wages, special investment privileges like tax exemptions, etc. For a country where foreign investments are being made, it also means achieving technical know-how and generation of employment. The continuous inflow of FDI in India, which is now allowed across several industries, clearly shows the faith that overseas investors have in the country's economy. FDI inflows soared by 24.5 % to US\$ 44.9 billion during FY2015, as compared to US\$ 36.0 billion in FY2014, according to Department of Industrial Policy and Promotion (DIPP) data. The top 10 sectors receiving FDI include telecommunication which received the maximum FDI worth US\$ 2.83 billion in the 10 month period, followed by services (US\$ 2.64 billion), automobiles (US\$ 2.04 billion), computer software and hardware (US\$ 1.30 billion) and pharmaceuticals sector (US\$ 1.25 billion).

India continues to be a preferred market for foreign investors. Listed India-focused funds saw record inflows of US\$ 1.7 billion in January this year, while most other emerging markets (EMs) saw redemptions to the tune of US\$ 3 billion. FIIs pumped in US\$ 2.87 billion into Indian equities in January, most of this coming from listed funds.

FII's net investments in Indian equities and debt are set to touch a record this financial year, backed by expectations of an economic recovery, falling interest rates and improving earnings outlook. FIIs have invested a net of US\$ 43.5 billion so far in 2014-15 expected to be their highest investment compared to others years. Of this, a huge amount US\$ 26.3 billion was invested in debt and it is their record investment in the asset class, while equities absorbed US\$ 17.2 billion.

After languishing a for quite a long, in the April-June quarter of the Q1FY15 India's Gross Domestic Product (GDP) witnessed a growth of 7.4% the fastest rate recorded over last 9 quarters and depicted signs of breaking shackles. In Q1FY14, the Indian economy grew at 7.2% and for the entire fiscal year 2014 economic growth on average basis came near that level. Thus against this backdrop, Q1FY15 GDP growth rate of 7.4% looks encouraging. A strong performance by manufacturing as well as services sectors have attributed to this uptick in growth. Moreover, despite a tad underperformance of agriculture in the current fiscal so far, the Indian economy has remained relatively resilient. Agriculture drops by 1.4% inQ4FY15 against 4.4% growth in Q4FY14. Manufacturing sectors which account for nearly 15% of India's GDP grew collectively at 7.4%% in FY15 compared to 5.3% growth recorded in FY14. Mining sector in FY15 grew by 2.4% and for the last quarter of FY15 it grew by 2.3% compared to FY14 numbers. Manufacturing sector in FY15 has pegged the growth of 7.1% in FY15, compared to 5.3% in FY14, it grew by 8.4% in Q4FY15 as against mere 4.4% in Q4FY14.

The outlook for Indian economy for short and long period remains positive. Young and educated population, new elected government, larger and positive integration with the major economies like US, Russia, Japan China, Europe etc makes the India a long term growth economy. India is preferred designation for investment by foreign economies.

Sectors projected to do well in the coming years include automotive, technology, life sciences and consumer products. Engineering and research and development (ER&D) export revenue from India is expected to reach US\$ 37-45 billion by 2020, from an estimated US\$ 12.4 billion in FY14, according to Nasscom. The steps taken by the government in recent times have shown positive results as India's gross domestic product (GDP) at factor cost at constant (2004-05) prices for Q1 FY15 is estimated at Rs 14.38 trillion (US\$ 232.63 billion), as against Rs 13.61 trillion (US\$ 220.12 billion) in Q1 FY14, registering a growth rate of 5.7%.

Overview of Indian Real Estate Sector:

India has witnessed strong economic growth in the last decade primarily on account of economic reforms that ushered in an era of liberalisation and provided for increased participation from the private sector. Opening up of the economy for investment was instrumental in spurring broad-based fundamental growth across various sectors, thereby leading to accelerated consumption and heightened investment activity in the economy. This growth has percolated to the construction and real estate industry as well, which is a conduit for growth in a large number of ancillary industries in the country.

(Source: credai.org)

The real estate sector in India assumed greater prominence with the liberalisation of the economy, as the consequent increase in business opportunities and labour migration led to rising demand for commercial and housing space. At present, the real estate and construction sectors are playing a crucial role in the overall development of India's core infrastructure. The real estate industry's growth is linked to developments in the retail, hospitality and entertainment (hotels, resorts, cinema theatres) industries, economic services (hospitals, schools) and information technology (IT)-enabled services (like call centres) etc and vice versa.

The Indian real estate sector has traditionally been dominated by a number of small regional players with relatively low levels of expertise and/or financial resources. Historically, the sector has not benefited from institutional capital; instead, it has traditionally tapped high net-worth individuals and other informal sources of financing, which has led to low levels of transparency. This scenario underwent a change with in line with the sector's growth, and as of today, the real estate industry's dynamics reflect consumers' expectations of higher quality with India's increasing integration with the global economy.

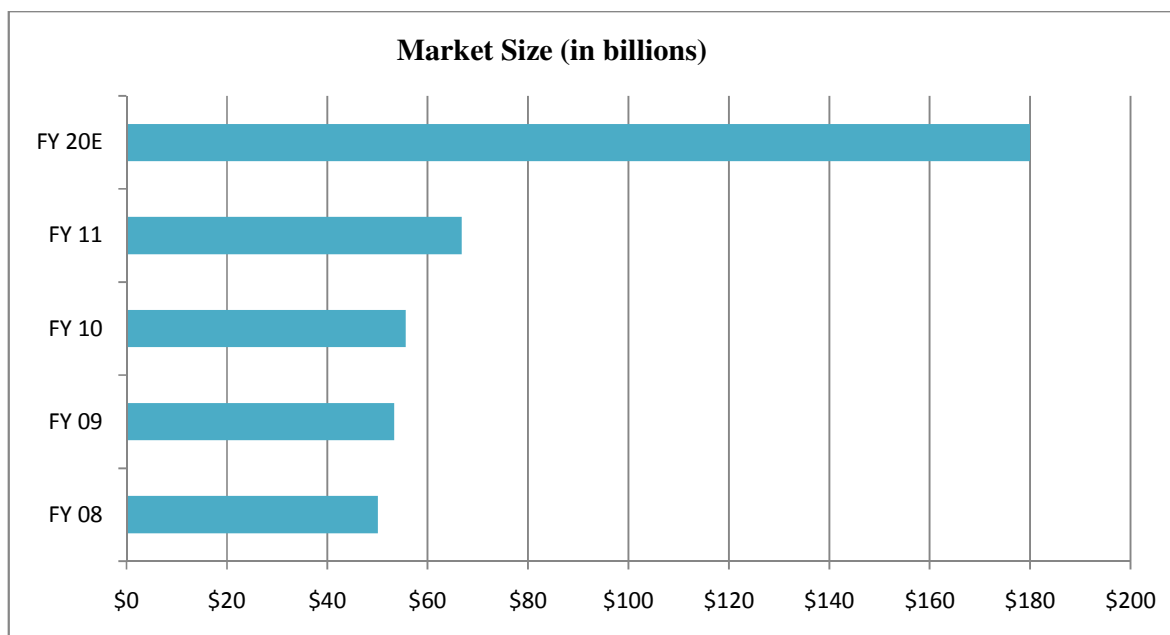

(Source: www.crisil.com)

In the country, real estate sector is the second largest employer after agriculture and is slated to grow at 30 per cent over the next decade. It comprises four sub sectors - housing, retail, hospitality, and commercial. The growth of this sector is well complemented by the growth of the corporate environment and the demand for office space as well as urban and semi-urban accommodations. According to a study by ICRA, the construction industry ranks third among the 14 major sectors in terms of direct, indirect and induced effects in all sectors of the economy.

A key driver of the economy, Infrastructure is highly responsible for propelling India's overall development. The industry enjoys intense focus from the top officials of the Government for initiating policies that would ensure time-bound creation of world class infrastructure in the country. This sector includes power, bridges, dams, roads and urban infrastructure development.

Market size of real estate in India

The market size of real estate in India is expected to increase at a CAGR of 11.2 per cent during FY2008 - 2020.

FDI in construction development sector as a per cent of India's total FDI

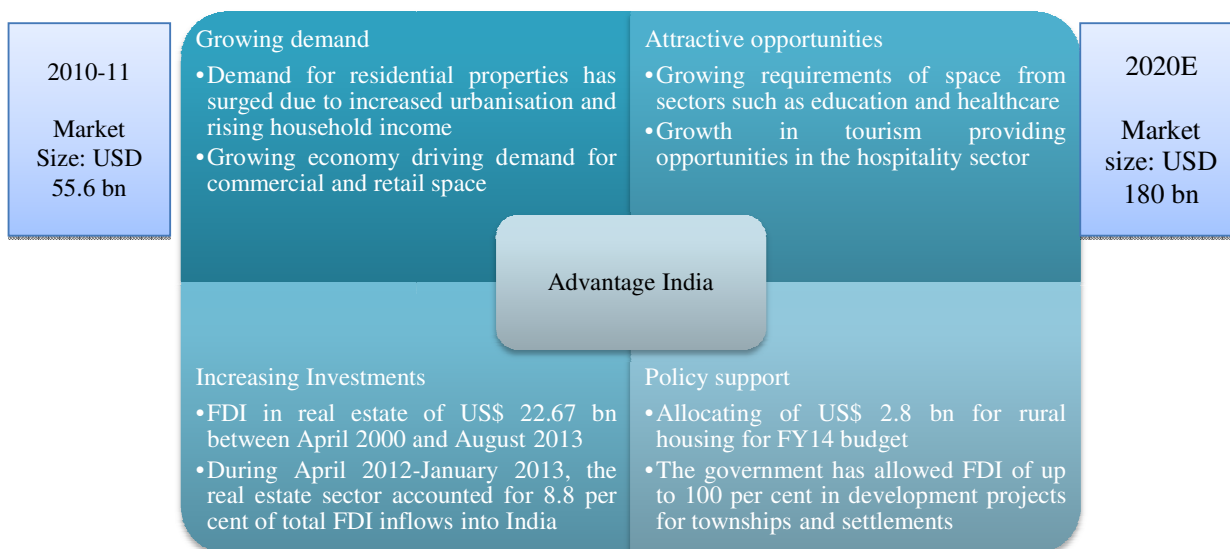

Total FDI in the construction development sector during April 2000-April 2014 stood at around US\$ 23.38 billion.

Key Growth drivers:

Growth Opportunities

- Growing Urbanization

Urbanisation in India has been increasing at an unprecedented rate, with almost 71 million people added to the urban population from 2001 to 2011. Going by this rate, close to 534 million people (greater than the combined population of the United States, Russia and France) will live in Indian cities by 2026. This offers tremendous opportunities for real estate development, particularly for housing.

- Growth in Household Income

India's household income is expected to increase by an average INR 60,000 per annum over a period of six years from 2009-10 to 2015-16. This is expected to fuel consumption and be a support base for growth in India's organised retail industry. Industry research indicates that out of the top five priorities of household spending, three categories belong to the retail segment. Also, as per the Centre for Monitoring Indian Economy (CMIE), close to 30% of a total household's income is spent on retail categories such as grocery, apparel and food & beverage. The most noticeable increase in income is likely to be observed in urban areas, which will result into further investment in the development of organised retail real estate.

- Growth in Information Technology Industry/Services Industry

Burgeoning growth in the information technology and outsourcing industry is a major demand driver for the growth of commercial real estate space in the country. This sector is the biggest office occupier in the country, comprising of approximately 70% of the entire office stock (including IT parks and special economic zones). As the IT industry grows in size, the demand for commercial real estate is likely to increase. This provides a significant opportunity for real estate developers to step in to meet the requirements of this sector.

- Growth in Economic Share

The economic contribution of the real estate sector is projected to increase significantly during the period, from 6.3% in 2013 to almost 13% in 2025. This spiralling of growth can be attributed to the significant construction opportunities offered by the housing sector, largely accentuated by the intensifying demand for residential space in the expanding urban limits of our cities.

Precast concrete is a construction product produced by casting concrete in a reusable mold or "form" which is then cured in a controlled environment, transported to the construction site and lifted into place. In contrast, standard concrete is poured into site-specific forms and cured on site. Precast stone is distinguished from precast concrete by using a fine aggregate in the mixture, so the final product approaches the appearance of naturally occurring rock or stone.

Indian realty majors are adopting precast technology in building their latest projects. The main advantages of precast technology are quality, speed of construction, and a value-for-money product. To avoid labour shortage, time delays and with an aim to deliver quality products, developers and builders are now adopting precast technology. The use of such technology helps in saving up to 64% of the time taken for similar projects using normal construction methods and technology. We have constructed 320 dwelling units in Anand District and 324 dwelling units in Dahod.

8. The Market Maker may also be present in the opening call auction, but there is no obligation on him to do so.
9. There will be special circumstances under which the Market Maker may be allowed to withdraw temporarily/fully from the market – for instance due to system problems, any other problems. All controllable reasons require prior approval from the Exchange, while force-majeure will be applicable for non-controllable reasons. The decision of the Exchange for deciding controllable and non-controllable reasons would be final.
10. The Market Maker(s) shall have the right to terminate said arrangement by giving one month notice or on mutually acceptable terms to the Merchant Banker, who shall then be responsible to appoint a replacement Market Maker(s).

Overview of Indian Economy

India, a South Asian nation, is the seventh-largest country by area, the second-most populous country with over 1.25 billion people, and the most populous democracy in the world. India is the fourth largest economy in the world in terms of purchasing power parity (PPP). Gross Domestic GDP of the country for the year 2014-2015 stood at INR 106.6 trillion (US\$ 1.60 trillion) as compared to INR 99.21 trillion (US\$ 1.49 trillion) in 2013-14. India's economy has witnessed a significant economic growth in the recent past, growing by 7.2 % in 2015 as against 6.6 % in 2014. India is set to become the world's fastest-growing major economy by 2016 ahead of China, the International Monetary Fund (IMF) said in its recent latest forecast. Service sector contributes 65% to the GDP while Industry and Agriculture shares the pie with 18% and 17% respectively. The Asian Development Bank (ADB) in its update released on July 16, 2015 for the Asian Development Outlook, kept its forecasts for India's GDP growth unchanged. The ADB expects India to grow by 7.8 % in 2015-16 backed by healthy growth in agriculture and a pick up in investment activity.

Passing through the phase of high current account deficit, rising inflation, slowing down in capex cycle and industrial activities, now the economy is witnessing some revival. Fall in crude oil prices supported to grapple the rising inflation as well as rates cuts is expected from the central bank that could be the positive sign for accelerating the investment cycle in the Economy. Index of Industrial Production which depicts the performance of eight core industries of Indian economy for 2014-15 has grown by 3.6 % as compared to 4.2 % in 2013-14.

India's current account deficit reduced sharply to US\$ 1.3 billion (0.2 % of GDP) in the fourth quarter of 2015 compared to US\$ 8.3 billion (1.6 % of GDP) in the previous quarter, indicating a shrink in the current account deficit by 84.3 % quarter-on-quarter basis., as global oil prices slumped while foreign investments into the country remained robust.

India's Index of Industrial Production (IIP) grew by 4.1 % in April 2015 compared to 2.5 % in March 2015. The growth was largely due to the boost in manufacturing growth, which was 5.1 % in April compared to 2.8 % in the previous month. May came in at 2.7 %, falling from 4.1 %, led by a sharp fall in capital goods and consumer goods data.

India's Consumer Price Index (CPI) inflation rate increased to 5.01 % in May 2015 compared to 4.87 % in the previous month. On the other hand, the Wholesale Price Index (WPI) inflation rate remained negative at 2.36 % for the seventh consecutive month in May 2015 as against negative 2.65 % in the previous month, led by low crude oil prices.

Apart from being a critical driver of economic growth, foreign direct investment (FDI) is a major source of non-debt financial resource for the economic development of India. Foreign companies invest in India to take advantage of cheaper wages, special investment privileges like tax exemptions, etc. For a country where foreign investments are being made, it also means achieving technical know-how and generation of employment. The continuous inflow of FDI in India, which is now allowed across several industries, clearly shows the faith that overseas investors have in the country's economy. FDI inflows soared by 24.5 % to US\$ 44.9 billion during FY2015, as compared to US\$ 36.0 billion in FY2014, according to Department of Industrial Policy and Promotion (DIPP) data. The top 10 sectors receiving FDI include telecommunication which received the maximum FDI worth US\$ 2.83 billion in the 10 month period, followed by services (US\$ 2.64 billion), automobiles (US\$ 2.04 billion), computer software and hardware (US\$ 1.30 billion) and pharmaceuticals sector (US\$ 1.25 billion).

India continues to be a preferred market for foreign investors. Listed India-focused funds saw record inflows of US\$ 1.7 billion in January this year, while most other emerging markets (EMs) saw redemptions to the tune of US\$ 3 billion. FIIs pumped in US\$ 2.87 billion into Indian equities in January, most of this coming from listed funds.

FII's net investments in Indian equities and debt are set to touch a record this financial year, backed by expectations of an economic recovery, falling interest rates and improving earnings outlook. FIIs have invested a net of US\$ 43.5 billion so far in 2014-15 expected to be their highest investment compared to others years. Of this, a huge amount US\$ 26.3 billion was invested in debt and it is their record investment in the asset class, while equities absorbed US\$ 17.2 billion.

After languishing a for quite a long, in the April-June quarter of the Q1FY15 India's Gross Domestic Product (GDP) witnessed a growth of 7.4% the fastest rate recorded over last 9 quarters and depicted signs of breaking shackles. In Q1FY14, the Indian economy grew at 7.2% and for the entire fiscal year 2014 economic growth on average basis came near that level. Thus against this backdrop, Q1FY15 GDP growth rate of 7.4% looks encouraging. A strong performance by manufacturing as well as services sectors have attributed to this uptick in growth. Moreover, despite a tad underperformance of agriculture in the current fiscal so far, the Indian economy has remained relatively resilient. Agriculture drops by 1.4% in Q4FY15 against 4.4% growth in Q4FY14. Manufacturing sectors which account for nearly 15% of India's GDP grew collectively at 7.4%% in FY15 compared to 5.3% growth recorded in FY14. Mining sector in FY15 grew by 2.4% and for the last quarter of FY15 it grew by 2.3% compared to FY14 numbers. Manufacturing sector in FY15 has pegged the growth of 7.1% in FY15, compared to 5.3% in FY14, it grew by 8.4% in Q4FY15 as against mere 4.4% in Q4FY14.

The outlook for Indian economy for short and long period remains positive. Young and educated population, new elected government, larger and positive integration with the major economies like US, Russia, Japan China, Europe etc makes the India a long term growth economy. India is preferred designation for investment by foreign economies.

Sectors projected to do well in the coming years include automotive, technology, life sciences and consumer products. Engineering and research and development (ER&D) export revenue from India is expected to reach US\$ 37-45 billion by 2020, from an estimated US\$ 12.4 billion in FY14, according to Nasscom. The steps taken by the government in recent times have shown positive results as India's gross domestic product (GDP) at factor cost at constant (2004-05) prices for Q1 FY15 is estimated at Rs 14.38 trillion (US\$ 232.63 billion), as against Rs 13.61 trillion (US\$ 220.12 billion) in Q1 FY14, registering a growth rate of 5.7%.

Overview of Indian Real Estate Sector:

India has witnessed strong economic growth in the last decade primarily on account of economic reforms that ushered in an era of liberalisation and provided for increased participation from the private sector. Opening up of the economy for investment was instrumental in spurring broad-based fundamental growth across various sectors, thereby leading to accelerated consumption and heightened investment activity in the economy. This growth has percolated to the construction and real estate industry as well, which is a conduit for growth in a large number of ancillary industries in the country.

(Source: credai.org)

The real estate sector in India assumed greater prominence with the liberalisation of the economy, as the consequent increase in business opportunities and labour migration led to rising demand for commercial and housing space. At present, the real estate and construction sectors are playing a crucial role in the overall development of India's core infrastructure. The real estate industry's growth is linked to developments in the retail, hospitality and entertainment (hotels, resorts, cinema theatres) industries, economic services (hospitals, schools) and information technology (IT)- enabled services (like call centres) etc and vice versa.

The Indian real estate sector has traditionally been dominated by a number of small regional players with relatively low levels of expertise and/or financial resources. Historically, the sector has not benefited from institutional capital; instead, it has traditionally tapped high net-worth individuals and other informal sources of financing, which has led to low levels of transparency. This scenario underwent a change with in line with the sector's growth, and as of today, the real estate industry's dynamics reflect consumers' expectations of higher quality with India's increasing integration with the global economy.

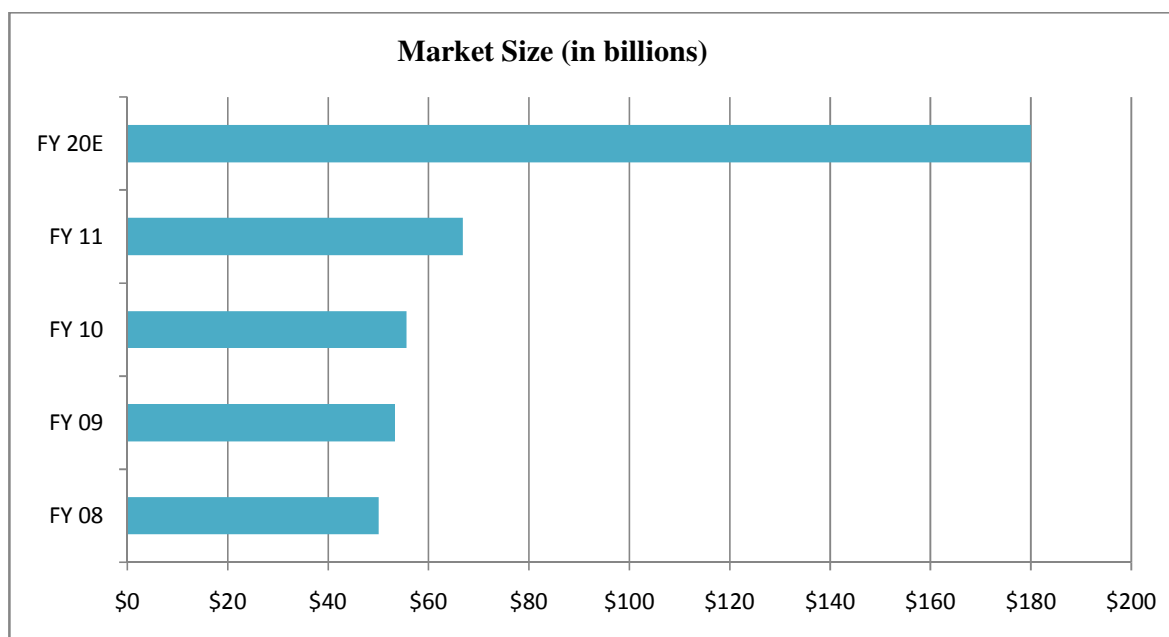

(Source: www.crisil.com)

In the country, real estate sector is the second largest employer after agriculture and is slated to grow at 30 per cent over the next decade. It comprises four sub sectors - housing, retail, hospitality, and commercial. The growth of this sector is well complemented by the growth of the corporate environment and the demand for office space as well as urban and semi-urban accommodations. According to a study by ICRA, the construction industry ranks third among the 14 major sectors in terms of direct, indirect and induced effects in all sectors of the economy.

A key driver of the economy, Infrastructure is highly responsible for propelling India's overall development. The industry enjoys intense focus from the top officials of the Government for initiating policies that would ensure time-bound creation of world class infrastructure in the country. This sector includes power, bridges, dams, roads and urban infrastructure development.

Market size of real estate in India

The market size of real estate in India is expected to increase at a CAGR of 11.2 per cent during FY2008 - 2020.

FDI in construction development sector as a per cent of India's total FDI

Total FDI in the construction development sector during April 2000-April 2014 stood at around US\$ 23.38 billion.

Key Statistics of Indian Reality Sector:

Key Growth drivers:

Growth Opportunities

- Growing Urbanization

Urbanisation in India has been increasing at an unprecedented rate, with almost 71 million people added to the urban population from 2001 to 2011. Going by this rate, close to 534 million people (greater than the combined population of the United States, Russia and France) will live in Indian cities by 2026. This offers tremendous opportunities for real estate development, particularly for housing.

- Growth in Household Income

India's household income is expected to increase by an average INR 60,000 per annum over a period of six years from 2009-10 to 2015-16. This is expected to fuel consumption and be a support base for growth in India's organised retail industry. Industry research indicates that out of the top five priorities of household spending, three categories belong to the retail segment. Also, as per the Centre for Monitoring Indian Economy (CMIE), close to 30% of a total household's income is spent on retail categories such as grocery, apparel and food & beverage. The most noticeable increase in income is likely to be observed in urban areas, which will result into further investment in the development of organised retail real estate.

- Growth in Information Technology Industry/Services Industry

Burgeoning growth in the information technology and outsourcing industry is a major demand driver for the growth of commercial real estate space in the country. This sector is the biggest office occupier in the country, comprising of approximately 70% of the entire office stock (including IT parks and special economic zones). As the IT industry grows in size, the demand for commercial real estate is likely to increase. This provides a significant opportunity for real estate developers to step in to meet the requirements of this sector.

- Growth in Economic Share

The economic contribution of the real estate sector is projected to increase significantly during the period, from 6.3% in 2013 to almost 13% in 2025. This spiralling of growth can be attributed to the significant construction opportunities offered by the housing sector, largely accentuated by the intensifying demand for residential space in the expanding urban limits of our cities.

GOVERNMENT INITIATIVES

'Under the Sardar Patel Urban Housing Mission, 30 million houses will be built by 2022, mostly for the economically weaker sections and low-income groups, through public-private-partnership, interest subsidy and increased flow of resources to housing sector', according to Mr M Venkaiah Naidu, Union Minister of Housing and Urban Poverty Alleviation.

The Government of India along with the governments of the respective states have taken several initiatives to encourage the development in the sector. Some of them are as follows:

- The Securities and Exchange Board of India (SEBI) has notified final regulations that will govern real estate investment trusts (REITs) and infrastructure investment trusts (InvITs). This move will enable easier access to funds for cash-strapped developers and create a new investment avenue for institutions and high net worth individuals, and eventually ordinary investors.
- The State Government of Kerala has decided to make the process of securing permits from local bodies for construction of houses smoother, as it plans to make the process online with the launch of a software called 'Sanketham'. This will ensure a more standardised procedure, more transparency, and less corruption and bribery.
- The Government of India has proposed to release the Real Estate (Development and Regulation) Bill which aims to protect consumer interest and introduce standardisation in business practices and transactions in the sector. The bill will also enable domestic and foreign investment flow into the sector.

CHALLENGES

The key challenges that Indian real estate sector is facing today are lack of clear land titles, absence of title insurance, absence of industry status, lack of adequate sources of finance, shortage of labour, rising manpower and material cost, approvals and procedural difficulties etc. The issues ailing this sector can be broadly classified in the following ways; however, it is important to note that each of them impact the developer as well as the buyer.

• TEDIOUS AND PROLONGED REGULATORY PROCESSES

Despite India's acute need for housing spaces as well as other commercial workspace needs, project launch and completion delays are becoming increasingly commonplace. Though there are a variety of factors contributing to the delays such as bottlenecks in the supply of raw materials and labour, difficulties in accessing funding, impact of changing market dynamics, etc, it is the process of complying with regulatory approvals that is contributing substantially to the delays. The process of approvals is extremely long drawn and tedious. The construction approval process is complex and as per the report of the Committee on Streamlining Approval Procedures for Real Estate Projects set up by the MHUPA, there are a minimum 34 regulatory processes to be followed by a developer for obtaining construction permits and take an average of 227 days. . As per CREDAI's estimates, as on 31st October, 2013 around 4,690 projects were awaiting Environmental Clearance at the SEIAA level in the State of Maharashtra. Most of them are waiting clearance since more than 2 years; these comprise of investment of about USD 100 8 billion.

• LAND RELATED PROBLEMS

Land is a limited commodity and the problem is aggravated by the limited supply of developed land with basic infrastructure in place. This is causing a rapid rise in land prices, which in turn is leading to high cost of housing. Lack of clear land titles across the country makes it difficult for the developers to acquire desired parcel of land. Not only does it increase the cost of acquisition, but may also involve long drawn and expensive litigation at a later stage. Further unfavorable land management policies prevalent in some states like the Urban Land Ceiling and Regulation Act (ULCRA) are some of the major roadblocks faced by this sector. Though the Central Government has abolished the Act, some of the states are yet to do the same. Land being a State subject, the laws

governing land differ from state to state in terms of outflow for property taxes, stamp duty and registration charges. Further low utilization of available land through low Floor Space Index (FSI) ceilings set in different cities, leads to lesser residences getting developed on a piece of land and translates to lower income for the developers, who is forced to raise the cost of each unit to cover the land costs. Finally, though there much support by all stakeholders for the Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement Act, 2012 (previously known as the LARR Bill), certain provisions of the Act could hinder the development of real estate projects and also push by the land acquisition costs substantially.

- **FUNDING PROBLEMS**

For a developer, gathering the initial funding comes as a big challenge, especially for new entrants; curtailing the housing supply to a large extent. The RBI has set threshold for the total maximum exposure to real estate, including individual housing loans and lending to developers for construction finance, for banks at 15%, which is quite low and is curtailing the growth of the sector. Absence of long term funding from banks is forcing developers to look at alternative sources of funds, most of which do not offer affordable interest rates and hence, the supply is being stifled. In the case of individual buyers, the persistently high inflation rates have made them suffer in multiple ways affecting their buying ability. Besides having lesser disposable incomes and savings, they are faced with increasing housing prices, further compounded by the high interest rates on mortgages.

- **MANPOWER & TECHNOLOGY PROBLEMS**

Despite being the second largest employer in the country, the construction sector as a whole faces manpower shortage. Further, the sector is heavily dependent on manual labour, faces longer time lines for construction completions, which results in supply getting deferred. Hence, technologically, faster and alternative methods of construction need to be adopted on a large scale, so special training for certain skills would also need to be imparted.

(Source: credai.org)

FUTURE PROSPECTS

The Indian real estate market size is expected to touch US\$ 180 billion by 2020. The housing sector alone contributes 5-6 per cent to the country's gross domestic product (GDP). Also, in the period FY08-20, the market size of this sector is expected to increase at a compound annual growth rate (CAGR) of 11.2 per cent. Retail, hospitality and commercial real estate are also growing significantly, providing the much-needed infrastructure for India's growing needs.

Demand analysis of top 8 cities ('000 units)

Demand to grow at a CAGR of 2 per cent over the period of 2013-17 across top 8 cities in India

As the Indian economy grows, the real estate sector keeps benefiting. With the increase in foreign tourist arrivals (FTA) every year, there is demand for real estate in the tourism and hospitality sector. Also, with the entry of major private players in the education sector, the major cities, that is Hyderabad, Bengaluru, Mumbai, Delhi, Pune, Chennai and Kolkata are likely to account for 70 per cent of total demand for real estate in the education sector. Demand for improved healthcare facilities is also expected to provide a boost to the construction sector in the country.

The Indian construction market is expected to be the world's third largest by 2020. The market is expected to more than double to US\$ 649.5 billion by 2020 from US\$ 360 billion in 2010. It is currently the fourth-largest sector in the country in terms of foreign direct investment (FDI) inflows. FDI in the sector is estimated to grow to US\$ 25 billion in 10 years.

Real estate contributed about 6.3 per cent to India's gross domestic product (GDP) in 2013. The market size of the sector is expected to increase at a compound annual growth rate (CAGR) of 11.2 per cent during FY 2008-2020 to touch US\$ 180 billion by 2020.

The Government of India has allocated US\$ 1.3 billion for Rural Housing Fund in the Union Budget 2014-15. It also allocated US\$ 0.7 billion for National Housing Bank (NHB) to increase the flow of cheaper credit for affordable housing for urban poor. The government has allowed FDI of up to 100 per cent in development projects for townships and settlements.

The entry of major private players in the education sector has created vast opportunities for the real estate sector. Emergence of nuclear families and growing urbanization has given rise to several townships that are developed to take care of the elderly. A number of senior citizen housing projects have been planned, and the segment is expected to grow significantly in future. Growth in the number of tourists has resulted in demand for service apartments. This demand is likely to be on the uptrend and presents opportunities for the unorganized sector.

(Source: www.ibef.org)

Long term prospects appear highly positive for the sector, with a potential increase in completed space from 3.6 billion sqft in 2013 to about 8.2 billion sqft in 2025. This will generate significant employment opportunities, with annual employment expected to increase from 7.6 million in 2013 to almost 17 million in 2025, thereby providing substantial socio-economic opportunities for growth in the country. Consequently, the contribution of the real estate sector to the economy is also expected to more than double from 6.3% in 2013 to almost 13% in 2025.

However, this projected expansion in the economic footprint of the sector is subject to an effective utilisation of the potential opportunities for growth and implementation of relevant policy measures to resolve bottlenecks bothering the sector. (Source: credai.org)

It is also expected that this sector will incur more non-resident Indian (NRI) investments in the near future, as a survey by an industry body has revealed a 35 per cent surge in the number of enquiries with property dealers. Bengaluru is expected to be the most favored property investment destination for NRIs, followed by Ahmedabad, Pune, Chennai, Goa, Delhi and Dehradun.

Private equity (PE) funding has picked up in the last one year due to attractive valuations. Furthermore, with the Government of India introducing newer policies helpful to real estate, this sector has garnered sufficient growth in recent times.

(Source: www.ibef.org)

India has huge potential to attract large foreign investments into real estate. With real estate reaching a point of saturation in developed countries and the demand and prices falling, global real estate players are looking at emerging economies such as India for tapping opportunities in real estate. Indian real estate will stay attractive due to its strong economic fundamentals and demographic factors. Moreover, there is a high level of global uncertainty looming over the developed and developing nations of the world. While developed economies are still struggling to regain their growth momentum, developing countries including India and China are expected to grow at a reasonably high rate. Investments in Indian real estate will fetch higher returns for investors as compared to other global markets. In the coming years, the opportunities in the real estate sector will attract more global players to India and hence will help the industry to mature, become more transparent, improve management and adopt advanced construction techniques.

Logistics speaks of "having the right item in the right quantity at the right time at the right place for the right price in the right condition to the right customer". Business logistics incorporates all industry sectors and aims to manage the fruition of project life cycles, supply chains, and resultant efficiencies.

There are two fundamentally different forms of logistics: one optimizes a steady flow of material through a network of transport links and storage nodes, while the other coordinates a sequence of resources to carry out some project (eg : restructuring a warehouse).

The two most obvious aspects of logistics are warehousing and transportation.

Warehousing and Storage:

Warehousing is defined as the storage of goods: raw materials, semi-finished goods, or finished goods. This includes a wide spectrum of facilities and locations that provide warehousing. Since this is a point in the logistics system where goods are held for varying amounts of time, the flow is interrupted or stopped, thereby creating additional costs to the product. In a macroeconomic sense, warehousing creates time utility for raw materials, industrial goods and finished products. It also increases the utility of goods by broadening their time availability to prospective customers.

Transportation:

Transportation involves the physical movement or flow of goods. The transportation system is the physical link that connects customers, raw material suppliers, plants, warehouses and channel members. These are the fixed points in a logistics supply chain. The basic modes of transportation are water, rail, motor carrier, air and pipeline, water being the slowest mode with rail, motor and air following in order of speed of delivery. Generally, the order is reversed when looking at costs.

Overview of Indian Logistics Industry

The Indian logistics industry was valued at an estimated US\$ 130 billion in 2012-13. It has grown at a CAGR of over 16 per cent over the last five years. The industry comprises the following main segments:

- Freight and passenger transportation via road, rail, air and water
- Warehousing and cold-storage

The contribution from the movement of goods including freight transportation and storage is about 90 per cent. Aggregate freight traffic is estimated at about 2-2.3 trillion tonnekilometres. Road dominates the mode of freight transport mix and constitutes about 60 per cent of the total freight traffic. Rail and coastal shipping account for about 32 per cent and 7 per cent, respectively, while the share of inland waterways transportation and air is less than 1 per cent each.

Warehousing comprises industrial and agricultural storage. Of the total warehousing space of about 1,800 million sqft, the industrial and agricultural segments constitute about 86 per cent and 14 per cent, respectively. Government organizations including Food Corporation of India, Central Warehousing Corporation and the state warehousing corporations account for about two-thirds of the agricultural warehousing segment 1. Warehousing also includes cold storage, comprising over 5,300 units; most of which are concentrated in the states of Uttar Pradesh, Punjab and West Bengal. According to the Ministry of Agriculture, at present, the cold chain capacity is about 9 million tonnes.

Freight Movement

- Air transport

Air cargo volume grew at a compound annual growth rate (CAGR) of about 8.5 per cent from 0.7 MMT in 1998-99 to 2.2 MMT in 2012-13. International traffic accounts for about 64 per cent of the total air cargo traffic and domestic cargo accounts for the remaining 36 per cent. Between 1998-99 and 2012-13, domestic and international cargos have grown at a CAGR of 10.4 per cent and 7.6 per cent, respectively. Expanding cargo-handling infrastructure at airports, demand for speedy delivery, greater trade and commerce and increase in the number of flights operating – are some of the key reasons for this growth.

Future growth in international cargo traffic is expected to be fuelled by trade agreements, especially, with the Asia-Pacific region, and trade in sectors like electronics, garments and pharmaceuticals. Growth in domestic cargo traffic is expected to be led by expansion of industrial activity beyond existing centres. Investments in airport and logistics infrastructure are also expected to drive demand of air cargo.

- Water transport

Shipping routes through coasts and inland waterways are primarily used for transportation of bulk freight. India possesses about 14,400 km of inland waterways. Over 3,600 km are navigable by large vessels, of which about 55 per cent is being used. To exploit the potential of this mode of transport, six national waterways have been declared; three of which are operational while three are being developed. In 2012-13, the estimated cargo movement via inland waterways was at around 89 million tonnes.

The coastal-cargo traffic at major Indian ports has grown at a CAGR of about 2.6 per cent from 76 MMT in 1998-99 to 106 MMT in 2011-12. The freight via water is expected to grow further in the light of the Maritime Agenda 2010-2020, increasing contribution from non-major ports and growing focus on ports on the east coast.

Overall cargo traffic has increased at non-major ports at a CAGR of about 19 per cent in the 14 years since 1998, indicating strong growth potential for these ports in the coming years; especially as the infrastructure improves.

- Rail transport

Rail freight segment contributes over 60 per cent to the total rail revenue. Freight movement via railways has grown at a CAGR of around 5.1 per cent from 794 million tonnes in 2007-08 to 969 million tonnes in 2011-12. As per the Railway Budget 2013-14, the government targeted freight volume of 1,047 million tonnes in 2013-14. As per the Rail Budget 2013, US\$ 20 billion of the overall US\$ 104 billion proposed investment in the 12th Five Year Plan would be mobilised through the PPP route. Private sector participation is likely to result in additional transport capacity of railways, and reduced traffic congestion at ports and roads.

- Roads transport

Unlike other modes of transport, roads address the demand for goods to cities as well as remote areas of the country. Since 1999-2000, road freight has increased from 467 billion tonnekilometres (BTKM) to 1,250 BTKM in 2011-12, at a CAGR of 8.6 per cent. It is estimated to have grown to 1,315 BTKM for 2012-13. According to the Ministry of Road Transport and Highways, road freight is expected to reach 1,835 BTKMs by 2016-17.

Development of national highways: National highways account for more than 40 per cent of the total road traffic. In the 12th Five-Year Plan period, the Government of India has set a target to construct 36,632 km of national highways in the period 2012-17, i.e., 2.65 times the target set in the previous plan period. Launched in 1998, the National Highways Development Programme (NHDP) aims to develop 50,000 km of National Highways by 2015 in seven phases and with an investment of US\$ 600 billion. Once completed, this is expected to further fuel the demand for road transport.

- Warehousing and cold storage

The warehousing market is highly fragmented with organised players holding only about 8 per cent of the total warehousing space in India; which indicates tremendous opportunity. Demand for modern warehouses is on the increase. They are equipped with tall designs, modular racking systems, palletisation and use of automation systems.

The Logistics sector in India has a multitude of players that operate across the industry value chain. Shipping lines and shipping agents provide water transport while port trusts and private terminal operators provide loading, unloading and other facilities. The public-private partnership model for development and maintenance of port terminals has contributed to growth of private terminal operators as well. In addition to the above categories, freight forwarders organize shipments of goods for companies and also provide carrier services; freight brokers negotiate rates on behalf of customers while third-party logistics providers offer clearing, forwarding, warehousing and other value-added services. Rail cargo is dominated by the Container Corporation of India (CONCOR) with a few new entrants like APL, and air cargo has numerous airline operators who deal with customers through their agents, and the International Air Transport Association is the regulatory body for the same. The wide gamut of players in India's logistics industry and the scale of operations have led to a significant number of challenges for the corporate treasury.

Some Features of Road Transport of Goods Industry

There are certain features of industry of transportation of goods by road that distinguish it from railway mode of freight movement in this country:

- While railways are a well-organized departmentally undertaken industry of the central government, road transport, particularly of goods, is almost entirely a private sector operation.
- It is also characterized by operations of a very large number of individual truck-owners scattered all over the country, in urban as well as rural areas, the presence of several layers of intermediaries like agents, brokers and transport operators between the actual consignors and consignees of goods and the fleet owners. The bulk of the truck-owners are generally owners of just one or two trucks, often self-driving.
- Bad roads, aged vehicles, inter-State barriers and other interfaces with officialdom, causing delays and additions to costs, often unofficial, slow speeds of movement, particularly in congested areas, result in losses in efficiencies of operation and productivity. Transit times are found to be nearly double those of developed countries.
- Equipment utilization rates for the Indian trucking fleet, which average 60,000 km to 100,000 km per truck-year⁶, are less than a quarter of those in developed economies. Despite many such impediments, mainly concerning the existing infrastructure, India has achieved a highly competitive low-cost road freight transport industry for basic services, with highway freight rates among the lowest in the world.

Logistics - India v. World

Logistics costs to the economy are variously estimated at around 9 per cent of GDP for the United States through to approximately 11 per cent for Japan, 12 per cent for France and Korea, and 18 per cent for China. Cost estimates for India do not appear to be as robustly calculated, and various studies have provided a range of 12 to 15 per cent of GDP²⁵. The high level of coordination required between the many fragmented and specialized participants in the logistics industry in India is sometimes cited as a cause for the relatively high proportion of logistics expenditure in GDP. In one panel study, it is noted that a 0.5 per cent decrease in logistics costs (relative to GDP) leads to a 2 per cent increase in trade and a 40 per cent increase in the range of products that are exported out of a country.

That said, it should be noted that measuring logistics costs is fraught with difficulty and that international comparisons may not be entirely robust. Broadly, however, studies on logistics costs focus on the following areas: (a) customer service including parts and service support and the handling of returns; (b) transport costs and warehousing including storage and site selection; (c) inventory management including packaging and reverse logistics; (d) lot-quantity costs including materials handling and procurement; (e) order processing costs and (f) information systems costs including those related to communication, forecasting and planning.

Compared to international counterparts the Indian logistics sector demonstrates a lack of scale, scope, flexibility and dynamism, and exhibits a yawning urban-rural divide. The performance of the sector is hampered by restrictive regulation, poor mainline infrastructure, inefficient inter-modal transfers of freight, fragmented industrial organization, and skill shortages amongst several other factors. The application of an integrated strategy for transport infrastructure development should ameliorate many of these deficiencies by creating a dynamic intermodal transport system.

Future outlook

With rising consumer demand and the resulting growth in global trade, the role of infrastructure support in terms of rails, roads, ports & warehouses hold the key to the success of the economy.

India's growing population requires a robust infrastructure. The government, through a series of initiatives, is working on policies to attract significant investor interest.

The Indian government plans to develop a total of 66,117 km of roads under different programmes such as National Highways Development Project (NHDP), Special Accelerated Road Development Programme in North East (SARDP-NE) and Left Wing Extremism (LWE), and has set an objective of building 30 km of road a day from 2016.

Also, about two-thirds of NHDP road projects (ex-phase IV) have not been awarded as yet, thus offering a massive opportunity to private players in future.

Indian port sector is poised to mark great progress in the years to come. It is forecasted that by the end of 2017 port traffic will amount to 943.06 MT for India's major ports and 815.20 MT for its minor ports.

Along with that, Indian aviation market is expected to become the third largest across the globe by 2020, according to industry estimates. The sector is projected to handle 336 million domestic and 85 million international passengers with projected investment to the tune of US\$ 120 billion. Indian Aviation Industry that currently accounts for 1.5 per cent of the gross domestic product (GDP) has been instrumental in the overall economic development of the country. Given the huge gap between potential and current air travel penetration in India, the prospects and possibilities of growth of Indian aviation market are enormous.

CONSTRUCTION SERVICES

We provide precast construction of housing and buildings for Government and private sector projects. We provide cost effective, quality and on time construction of projects awarded to us.

About the Precast Technology

Precast concrete is a construction product produced by casting concrete in a reusable mold or "form" which is then cured in a controlled environment, transported to the construction site and lifted into place. In contrast, standard concrete is poured into site-specific forms and cured on site. Precast stone is distinguished from precast concrete by using a fine aggregate in the mixture, so the final product approaches the appearance of naturally occurring rock or stone.

Indian realty majors are adopting precast technology in building their latest projects. The main advantages of precast technology are quality, speed of construction, and a value-for-money product. To avoid labour shortage, time delays and with an aim to deliver quality products, developers and builders are now adopting precast technology. The use of such technology helps in saving up to 64% of the time taken for similar projects using normal construction methods and technology. We have constructed 320 dwelling units in Anand District and 324 dwelling units in Dahod.

Process Involved in Precast Concrete Process

- 1) Production of reinforced cages and main connections:** The precast factory often has specialist workshops for the manufacture and maintenance of moulds, and for the production of jig-built reinforcing cages and connections.
- 2) Assembly of moulds:** The reinforced cage is positioned in the partly assembled mould, then the remaining mould section is completed.

- 3) **Mix being poured:** Carefully specified concrete is placed into the mould. Many precast works now employ computer controlled batching plants.
- 4) **Precast concrete being moved to the storage area:**
Once an appropriate strength has been reached, the precast units are moved to the storage area. Units are usually handled within hours of casting as part of the rapid production cycle.
- 5) **Transport to site:** The components are delivered to site in a pre-determined sequence to ensure that hardened concrete are ready for instant erection.
- 6) **De-molding of panels after checking the results by rebound hammer and Concrete Cube Testing**
- 7) **Stacking of panels in casting yard and wet curing of panels**

- 8) **Connection of Bolts for connecting wall to wall, wall floor wall and floor to floor connection using Connection bolts nuts and washer made of special EN material.**

- 9) **Erection of Building**

- ❖ The transport and storage of various components of concrete for cast in site work are eliminated when precast members are adopted.

- ❖ The work can be completed in a short time, when precast units are adopted.
- ❖ When precast structures are to be installed, it is evident that the amount of scaffolding and formwork is considerably reduced.

Disadvantage of Precast Technology

- ❖ If not properly handled, the precast units may be damaged during transport.
- ❖ It becomes difficult to produce satisfactory connections between the precast members
- ❖ It is necessary to arrange for special equipment for lifting and moving of the precast units.
- ❖ The economy achieved in precast construction is partially balanced by the amount to be spent in transport and handling of precast members. It becomes therefore necessary to locate the precast factory at such a place that transport and handling charges are brought down to the minimum possible extent.
